

SAMPLE PUZZLE #1

Work all the problems. Then start with #1. The divisor tells how many lines to move toward the right in the grid, starting at zero. The quotient tells how many lines to move upward, starting at zero. When you've moved the correct distance in both directions, make a dot. Do the same for #2. Draw a line from the #1 dot to the #2 dot. Make the dot for #3. Draw a line from the #2 dot to the #3 dot. Continue until you get to the last problem.
