

Kite Instructions

Some assembly required:

1. Insert tails through spine. (If your kite does not include tails, you can cut strips from a plastic grocery bag or any thin plastic to use for added stability.)
2. Connect spars (Note direction of connector in top view).
3. If not pre-assembled, insert the small string into the two holes on the kite. Thread the ring onto the string and then tie the two ends of the string together. Tie the string from the handle onto the ring.
4. Have fun!
