

1. Insert ship into slit to make it stand up and adhere the green circle in the opposite corner. Insert the cup into the green circle.

2. To create the top section of the lighthouse:
 Curve the yellow acetate piece into a cylinder shape and secure by tucking the tab into the slot (Fig. A).
 Form the black "cap" on the top of the lighthouse by tucking the foam tab into the slot. (Fig. B)
 Place the white double-sided adhesive foam strip across top of the acetate, then set the black foam "cap" on top, so that the cap adheres to the acetate (Fig. C).

3. Place the top section of the lighthouse on top of the cup. Use the black adhesive foam strip to wrap around the top of the cup where it meets the acetate, securing the top of the lighthouse to the cup.
